### Irving Drive Reconstruction Project

Dear resident,

The Town of Georgina has hired Chisholm, Fleming and Associates (CFA) to design the reconstruction of Irving Drive between Clovelly Cove and the cul-de-sac at the western end of the road as shown on the project study area below. It is anticipated that the design will be completed in late Fall 2022. Construction is anticipated to start in Spring 2023, subject to the results of the design works and Council approval.

During the design phase, the project team will be in the project study area for site visits and field studies including surveying, utility locates, testing and drilling to understand the existing conditions of the road. There may be some temporary noise and dust from the equipment and trucks; however, the project team will try to limit disturbances where feasible. As the project team learns more about the existing conditions, the project may proceed as a Municipal Class Environmental Assessment, a standardized process for municipal projects that are undertaken frequently.

Project information will be shared with you at key times. A meeting for study area residents and neighbours will be planned once preliminary options are available.

To have your name added to the project update list, please contact one of the project team members listed below. A dedicated project webpage has also been created and will be updated as the project progresses. Please visit [georgina.ca/IrvingDrive](http://georgina.ca/IrvingDrive) for the latest updates.
