

Public Notice

Between April 15 and May 31, 2024, G.D.G. Canada Inc. will be applying a biological larvicide by air and ground to stagnant water in order to control larval mosquitoes that impact on the residents of Pefferlaw, Port Bolster and Udora. The applications are weather dependent and are likely to occur close to April 25, 2024

Specifically, the sites to be treated lie within the area bounded to the north by Lake Simcoe, to the east by Lake Ridge Road, to the south by Ravenshoe Road and to the west by Weir's Sideroad.

The program will use multiple applications of the biological larvicides VectoBac 200G (PCP #18158, granular) or My-Crobe 200G (PCP #34628, granular) and VectoBac 1200L (PCP #21062, liquid) or My-Crobe XT (PCP #34633, liquid). The granular will be applied by helicopter or drone and the liquid by truck mounted and backpack sprayers.

The treatment area map and program details may be accessed at the Town of Georgina Operations Division, 26557 Civic Centre Rd., Keswick, or the Town of Georgina's website georgina.ca/mosquito

For further information regarding the larvicide application contact GDG:
