

2014 MOSQUITO PROGRAM

NOTICE OF GROUND AND AERIAL LARVICIDE APPLICATION FOR THE CONTROL OF LARVAL MOSQUITOES FOR NUISANCE CONTROL

Between **April 1** and **May 31, 2014**, Pestalto Environmental Health Services Inc. will be applying a biological larvicide by air and ground to stagnant water in order to control larval mosquitoes that impact on the residents of Pepperlaw and Port Bolster. The applications are weather dependent and are likely to occur close to **April 15**.

Specifically, the sites to be treated lie within the area bounded to the *North* by Lake Simcoe, to the *East* by Lake Ridge Road, to the *South* by the westerly extension of Rosslyn Drive (the unopened 3rd Concession Road Allowance), and to the *West* by Weir's Sideroad.

The program will use multiple applications of the biological larvicides **VectoBac 200G** (PCP #18158, granular) and **VectoBac 1200L** (PCP #21062, liquid). The granular will be applied by helicopter and the liquid by truck mounted and backpack sprayers.

The treatment area map and program details may be accessed at the Town of Georgina Engineering Division, 26557 Civic Centre Road, Keswick, or the Town of Georgina's web site www.georgina.ca

For further information regarding the larvicide application contact Pestalto:
